

Nail-In Cable Clips

These nail-in cable clips are used to safely install cable TV, fibre optics, computer networks, telephone and other communication systems, hydraulic and pneumatic systems. They are moulded in tough, ultra-violet resistant, electrically insulating, high density polyethylene. The main stress areas of the clip have reinforcing ribs designed into the part to strengthen and absorb impact. The contact edges are radiused to protect damage to cable or tubing.

Pre-assembled with heat-treated, galvanized steel nails, ready for use in masonry, wood, stucco or plaster. Easily and efficiently installed.
